Two channels of conductivity/resistivity
- Calibration with NIST traceability
- Accurate three-wire temperature measurement

200CR Two-Channel Conductivity/Resistivity Measurement System
Benefits

- Single instrument for wide range of measurement with appropriate two-electrode sensors
- Easy operation with text-based menus
- One instrument model for:
  - Conductivity
  - Resistivity
  - Temperature
  - Total Dissolved Solids (ppm/ppb)
  - % Rejection
  - Difference
  - Ratio
  - % Chemical Concentration for HCl, H₂SO₄, NaOH

Each channel can be set to measure two of the parameters listed, for a total of four different measurements. With a wide choice of displayed information, the Thornton 200CR instrument sets the standard for flexibility and value in its class.

The instrument's dual input option allows all combinations of 0.1 cm⁻¹ and 10 cm⁻¹ conductivity sensors to be used together. Only a single channel may be used with a 50 cm⁻¹ sensor, unless sensor locations are electrically isolated from each other.

Applications

Pure water treatment for ultrapure semiconductor rinsing, critical power/steam makeup and pharmaceutical waters requires accurate, reliable monitoring of purification steps as well as the final product quality. The 200CR provides efficient two-channel monitoring of reverse osmosis (with % rejection computation), deionization and distillation stages, assuring in-spec operation throughout the system.

Semiconductor processing in rinsers and wet benches relies on precise resistivity alarming at ultrapure 18 Mohm-cm levels. Highest measurement accuracy and world-recognized Thornton-Light temperature compensation assure consistent water and product quality.

Power plant cycle chemistry monitoring requires specialized temperature compensation for cation conductivity and ammonia/amine treated specific conductivity measurements. Thornton's sophisticated compensation algorithms have proven themselves superior by a wide margin, fully accounting for the changing ionization of water as it is affected by acidic cation conductivity samples or alkaline treatment chemicals.

Pharmaceutical water monitoring to meet USP <645> requires accurate, validated, non-temperature compensated conductivity measurement plus the temperature value. Compensated values can also be displayed with the 200CR. In addition, temperature and uncompensated conductivity values are compared against the internal USP <645> Stage 1 table of limits with user selectable safety margins, and the 200CR signals an alarm if the margin is exceeded.
Functional Ranges:
- Conductivity: 0.002 µS/cm to 1000 mS/cm
- Resistivity: 1.0 Ω·cm to 500 MΩ·cm
- TDS (ppm/ppb) covers equivalent conductivity range
- Concentration: 0-15% HCl, 0-20% H₂SO₄, 0-15% NaOH, by weight
- Temperature: -40 to 200 °C (-40 to 392 °F)

Resolution:
- Conductivity: 0.001 µS/cm
- Resistivity: 0.001 MΩ·cm
- Temperature: 0.01 °C

Sensor Inputs: From Thornton conductivity sensors with Pt1000 RTD, via accessory patch cord.

Temperature Compensation:
Automatic, referenced to 25°C for resistivity, conductivity, % rejection and TDS. Field selectable for standard high purity (Thornton/Light), cation/ammonia/ETA (power industry), or 75% isopropyl alcohol. Non-temperature compensated measurement is also standard, to meet USP <645> requirements. Concentration measurements also include specialized compensation for the specific material.

Outputs
- Setpoints/Alarms:
  Four controlled setpoints can be set as high or low limits (or USP <645> limit for conductivity). Any relay can be activated by multiple setpoints.
- Relays:
  Standard: 2 mechanical SPDT, 5 amp at 250 VAC or 30 VDC resistive load; Optional, additional: 2 AC-only, solid state, SPST, 1.5 amp, 250 VAC resistive load, 10 mA minimum. All relays are potential-free and have individually adjustable delay and hysteresis (deadband).
- Analog output Signals:
  Two optional powered 4-20 mA outputs (recalibratable to 0-20 mA), 500 ohm load maximum, freely scalable to any parameter and range; isolated from input and from ground. Not for use with externally powered circuits.
- Serial output:
  RS232, maximum distance of 50 feet (15 m); RS422, maximum distance of 4000 feet (1220 m); field selectable up to 19.2 kbaud. External isolation required with 50 cm⁻¹ sensor.

Performance
- Accuracy:
  ± 0.5% of reading or ± 0.5 ohm, whichever is greater; ± 0.25 °C (3-wire measurement)
- Repeatability:
  ± 0.1% of reading, ± 0.13 °C
- Update Rate:
  All measurements and outputs, once per second
- Ratings/approvals:
  Meets CSA/NRTL and CE requirements, UL listed
- Analog output accuracy:
  ± 0.05 mA within 15-30 °C ambient

Environmental
- Storage temperature:
  -40 to 70 °C (-40 to 158 °F)
- Operating temperature:
  -10 to 55 °C (14 to 131 °F)
- Humidity:
  0 to 95% RH, non-condensing
- General:
  If the equipment is used in a manner not specified by Thornton, the protection provided by the equipment may be impaired. For indoor use, pollution degree 1.
- UL Electrical Environment:
  Installation (overvoltage) Category II

Enclosure
- Display:
  16 character backlit LCD (4.8 x 9.6 mm)
- Keypad:
  11 flush, tactile feedback keys
- Material:
  ABS-PC polymer alloy
- Panel cutout:
  3.78 x 7.56" (96 x 192 mm) DIN
- Wall mount:
  Available with accessory back cover
- Pipe mount:
  For 1-1/2 to 4" vertical pipe, available with accessory kit and back cover
- Weight:
  1.9 lb. (0.9 kg)
- Rating:
  NEMA 4X, IP65 panel mount and accessory back cover
- Sensor cable length, max:
  200 feet (61 m)

Power
- Line:
  90-130 VAC or 180-250 VAC, 50-60 Hz, 12W maximum; or 12-30 VDC, 300 mA steady state, 600 mA inrush. DC power must be isolated from earth ground.
- Memory retention:
  On power loss all programmed values are retained in non-volatile memory without batteries.

- DI Regeneration acids/bases

200CR Instrument/Cell Ranges
- 0.01/cm
- 0.1/cm
- 10/cm
- 50/cm
Sensor Selection Criteria

- Conductivity or resistivity range — resistivity (Mohm-cm) = 1/conductivity (µS/cm)
- Mounting type — Insertion, retractable or submersion
- Pipe connection type and size
- Chemical compatibility, including cleaning and disinfection processes. Rely on process experience or consult Thornton for unusual process composition. PEEK is recommended for exposure to ozone and other oxidizers. Monel is recommended for exposure to hydrofluoric acid.
- Temperature requirements, including steam and/or hot chemical cleaning
- Suspended solids — four-electrode sensors have flat surfaces which are less likely to accumulate solids and are easier to clean than others. See the Thornton 2000 system data sheet for these applications.

Specifications

Cell Constant Accuracy: ± 1% of reading (± 5% for 240-401)
Cell Constant Repeatability: ± 0.25% (± 2% for 240-401)
Temperature Sensor: Pt1000 RTD, (thermistor for 240-501)
Temperature Accuracy: ± 0.1°C at 25°C, except 240-501
Cable Jacket Material: 240-Series - PVC, 80°C rating; 243-Series - Teflon, 200°C rating
Maximum Sensor Distance: 200 ft (61 m)
Surface Finish (sanitary sensor): Ra 8 microinches (0.2 micrometers), 316L SS is electropolished
